

HYPER TEXT MARKUP LANGUAGE (HTML)

Using Images in HTML

Images in HTML:

In HTML we have the capability of displaying images in a webpage. These images must be in a format that the web browser can handle, such as Graphics Interchange Format(GIF), Joint Photograph Expert Group(JPEG), and for some browser Portable Network Graphics(PNG) formats.

Displaying images in webpage is done by using ** tag**

Format:

Attributes of ** tag**:

- alt : this attribute is used to specify text to be displayed in place of image for browser that cannot handle graphics.
- src: specifies the URL of the image to display.
- border: sets the border for the image.
- height: indicates the height of the image.
- width: indicates the width of the image.
- hspace: sets the horizontal space around the image.
- vspace: sets the vertical space around the image.

The **** tag is used to embed images in an HTML document. It is an empty tag, meaning it does not have a closing tag and is written as a self-closing tag in HTML.

Solved Example:

```
<html>
<head>
<title>Images</title>
</head>
<body bgcolor="pink">
  <center>
    <h1>Images Example</h1>
    <h3>Here is an image</h3>
    
  </center>
</body>
</html>
```

Course & Test Series

Hyper Text Markup Language HTML - Advance - Module 2

Solved Example Using Border and Spacing

```

1 <html>
2 <head>
3 <title>Borders & Spaces</title>
4 </head>
5 <body bgcolor="#18F6CA">
6 <center>
7 <h1>Adding Border & Spacing Image</h1> <br> <br>
8
9 <h3>Here are Four Images in a Border: These Images are Parts of a Computer</h3>
10 
12 
14 
16 
18 </center>
19 </body>
20 </html>
    
```

Adding Border & Spacing Image

OUTPUT of Use of Border and Spacing in Images

Here are Four Images in a Border: These Images are Parts of a Computer
