

HYPER TEXT MARKUP LANGUAGE (HTML)

Using Lists in HTML

CBSE

In HTML, a list is a collection of related items that are grouped together for the purpose of displaying them in a structured and organized manner. Lists are used to present information in a clear and readable format, making it easy for users to follow and understand the content.

ICSE

Lists in HTML are essential for organizing content and improving the structure, readability, and usability of web pages.

NTSE

Here are some key reasons why lists are important in HTML:

1. Organization and Structure:

Lists help in organizing content in a clear and logical manner. They allow you to group related items together, making it easier for users to understand the information presented.

2. Improved Readability:

Lists break down information into manageable chunks, enhancing readability. They make it easier for users to scan content quickly, especially on mobile devices.

4. Consistency and Uniformity:

Lists provide a consistent way to present repeated elements or sequences. This uniformity helps users anticipate the structure and enhances their overall experience.

6. Enhanced User Interaction:

Ordered and unordered lists can be used to create interactive elements like navigation menus, to-do lists, and more, enhancing user engagement.

7. Accessibility:

Proper use of lists ensures that content is accessible to users with disabilities. Screen readers can announce the number of items in a list and their order, providing context to visually impaired users

1. Unordered List: Displays items using bullets.
2. Ordered List: Displays items in a numerical sequence, and supports various numbering styles like Arabic numerals, Roman numerals, and so on.
3. Definition List: Organizes items in a format similar to a dictionary, with terms and their corresponding definitions.

An ordered list is used for items that need to be displayed in a specific sequence. Items in an ordered list are typically marked with numbers or letters.

Unordered List:

An Unordered list is a list of items that are marked with burden. The Unordered list is created by using `` tag are the list items in the list are created by `` tag and the list items in the list are created by `` tag.

The elements are typically indicated by bullet points (•) but can be customized with disc (◦), circle (o), and square shapes (■).

Example:

```
<ul>
  <li>Apples</li>
  <li>Bananas</li>
  <li>Oranges</li>
</ul>
```

Output (browser)

- Apples
- Bananas
- Oranges

Ordered List in HTML

These are also called numbered lists in HTML. It represents the HTML list items, which are sequentially ordered, either in increasing (1, 2, 3, etc.) or decreasing (3, 2, 1, etc.) order.

An ordered list is represented by either numbers, letters (A, B, C, etc.), or roman numerals (I, II, III, etc.).

Example:

```
<ol>
  <li>Install software</li>
  <li>Configure settings</li>
  <li>Run the program</li>
</ol>
```

Output

1. Install software
2. Configure settings
3. Run the program

Attributes of Ordered List:

1. Start Attribute

👉 **Purpose:** Sets the number where the list should begin instead of 1.

Example:

```
<ol start="5">
  <li>Step Five</li>
  <li>Step Six</li>
  <li>Step Seven</li>
</ol>
```

Output:

5. Step Five
6. Step Six
7. Step Seven

2. Reversed Attribute

👉 **Purpose:** Makes the list count backwards (descending order).

Example:

```
<ol reversed>
  <li>Final Step</li>
  <li>Second Step</li>
  <li>First Step</li>
</ol>
```

Output:

3. Final Step
2. Second Step
1. First Step

3. Type Attribute

👉 **Purpose:** Defines the numbering style (letters, numbers, Roman numerals).

Options:

**Course
&
Test Series**

Hyper Text Markup Language HTML - Advance - Module 1

- type="1" → Default numbers (1, 2, 3)
- type="A" → Uppercase letters (A, B, C)
- type="a" → Lowercase letters (a, b, c)
- type="I" → Uppercase Roman numerals (I, II, III)
- type="i" → Lowercase Roman numerals (i, ii, iii)

Definition Lists:

These lists include both definition terms as well as their definition. To create the definition lists we use <dl> tag. For creating definition terms we use <dt> tag and for data definitions we use <dd> tag.

Ingredients for Maggie for Dinner

Here is what you will need:

1. 1 cup water per Maggie cake
2. ½ tablespoon Salt
3. ½ tablespoon Red Chilli
4. Peas
5. Corn
6. Onions
7. Tomatoes
8. French Beans
9. Protein (Paneer or Cheese)

The Procedure for Dinner Maggie:

1. Caramelize the onions, saute the peas, corn, tomatoes, and beans in a pan
2. Add the salt and red chili.
3. Cook the cheese or paneer.
4. Boil the water in a pot
5. Add the magic masala once the water starts boiling
6. Add the veggies in and let them stew for 4–5 minutes
7. Add the Maggie, cover the pot and cook on a low flame for 3–4 minutes
8. Once the noodles start softening, add the paneer or cheese (or both!)
9. Let sit for 5 minutes after turning off the gas
10. Serve hot and enjoy.

10 Line Speech On Value Of Education

- A. Education is the acquisition of new knowledge or the study of past experiences and cultures.
- B. Education is passed onto the next generation in a way that can be used to create a prosperous future.
- C. We have acquired our behaviour and perception from either receiving instructions or seeing the world around us.
- D. The importance of education enables us to become aware of our abilities, which allows us to go the extra mile.
- E. Education helps people to develop strong morals and ethical values in themselves.
- F. The first values we learn in school are reading, writing, and comprehending.
- G. The spread of technology and information will increase as we receive more proper education.
- H. The importance of education can never be diminished by a natural or man-made tragedy.
- I. Our generation will progressively develop into reasonable creatures if education is centred on values and integrity and supported by moral standards.
- J. A nation's economic stability is significantly influenced by the value of education.
