

1. Hormonal secretion is affected if it is needed in the body for example, when the blood sugar level is high, insulin is secreted to lower it by the pancreas and vice versa.
2. Autonomic nervous system
3. pancreas
4. ?
5. ?
6. When the pituitary gland does not function properly it can cause someone to have gigantism or dwarfism from lack/excess amount of hormones present in the body.
7. Ovary and Testis secrete estrogen and testosterone. These hormones cause people to start puberty.
8. Nervous system controls the muscles whilst the endocrine controls the chemicals in our body.
9. the nervous system maintains body temperature, when the body is cold the nervous system will make it shiver which will generate heat. On the other hand, when the body is hot, it will release sweat to cool the body down
10. Pituitary gland is known as the master gland. It releases growth hormone.
11. Hormones are chemicals secreted by hormonal glands. Each hormone has a different purpose in the body.
12. ?
13. The sympathetic nervous system prepares the body for a stress-related activity. The parasympathetic nervous system makes the body come back to its normal, day to day state.
