## Science Test

- 1) Sal and wild mango are examples of endemic flora.
- 2) If the habitat of animal is disturbed survival of animals will become difficult.
- 3) CSB.
- 4) About 21.67% of the area is under forest cover in India.
- 5) The major threat to survival of organisms is population growth and resource consumption, climate change and global warming.
- 6) A group of population or population whose members share common characteristics and are capable.

7) Endangered species are the organism whose numbers have reduced and if not conserved will become extinct.  
Eg - tiger, red panda etc.

8) Ecosystem - A system formed by an ecological community and its environment that functions as a unit.

Biodiversity - biodiversity is a biological variety and of a life on Earth.  
Biodiversity is a measure of variation at the genetic species and ecosystem level.

9) If we go on cutting of trees it will disturb the balance in nature. There will be an increase in temperature of the earth which will result global warming.

- 10) No, it is not at all justified to cut trees to meet the ever increasing demands of the human population. Forest are the habitat of several organisms.
- 11) Global Consequences of deforestation are Climate Change, desertification, soil erosion, fewer crops, flooding.
- 12) a) Overexploitation -  
It is that reason that the organisms are hunted so much that their population decreases and could not able.
