3. Differentiate between application software and system software?

Ans:→ Application Software :- Application software are used by the user according to the need of the user. If we don't use application software then the node or computer is not effected. The system is work continuously.  
For example - Microsoft word, Microsoft Powerpoint etc.

System Software :- It is the software which is used to open the operating system. It helps to do commands and perform operations, without system software computer is only a box. Example - ~~Operating~~ Operating System.

4. What do you understand by output devices?

Ans:- Output Devices :-> When we give an input by input devices then after processing it gives some output to us. Printer, Monitor are examples of output devices.

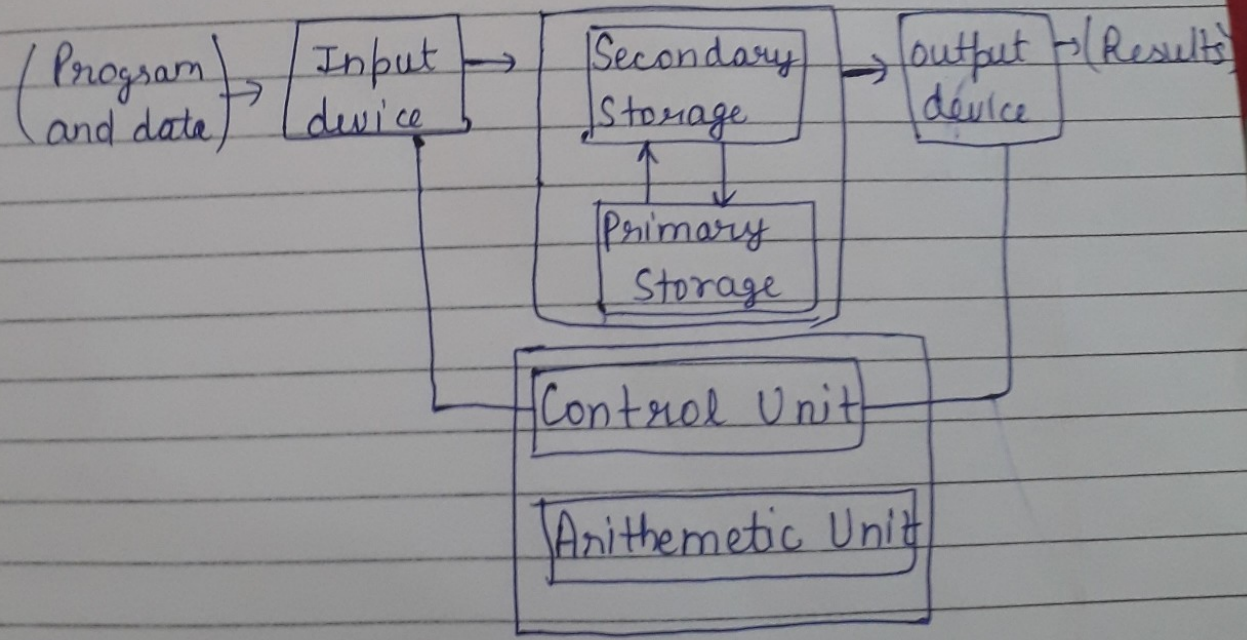

Printer :-> Printer is a printing machine. It is used for the hard copy of the output.

Monitor:- Monitor is also an outputting device. It gives the soft copy of the output after processing.

2. Define System Software in detail.

Ans:-> It is a software which is used to operate the computer or device. Without system software a system can not be operated. Example:- ~~For~~ operating system.

Ans:-5.

A Computer system is a complete computer installation including central processing unit.

1. • Power Supply :- Power supply is used to supply the power to the device.
- Motherboard :- It is an hardware device which is physically touched by the user.
