Q → Computer Memory  
Computer Memory is the function in which we can store data. in computer we can store our data in through memory function.

Q → what is the basic function of Memory  
→ the basic function of the computer memory is to have data in the computer.  
there are two types of memory.  
↳ internal      ↳ (2) external memory.

Q → what are the function of control unit.

→ the main function of the computer unit is CPU (control processing unit) it helps to control the computer system. it is also called the brain of system. without C.P.U we can not command the computer. it will not work without C.P.U

Q → explain some characteristics of primary memory  
→ In Internal memory we ~~can~~ not have to save data. there is no fix data and it is volatile.
