Q(1) Define  
① What is the basic function of memory.

② What are the functions of control unit.

③ Explain some characteristics of primary memory.

④ Explain the different steps in instruction cycle.

Q(1) In computing memory is a device or system that is used to store information for immediate use in a computer or related computer hardware and digital electronic devices. The term memory is often synonymous with the term primary storage or main memory.

⑤ Function of memory:  
Our memory has three basic functions: encoding, storing and retrieving information.

③ The control unit of the central processing unit regulates and interconnects the operation of the computers. It selects

and retrieves instruction from  
the main memory in proper sequence  
and interprets them as so  
active.
