

Q. → 1.)
Ans. →

Computer Memory →

It is the part of the C.P.U of computer. In memory computer store all information, what we input in. If information, data, Accounts are very old like ~~antient~~ antient records, it store all these.

C.P.U is the brain of the computer, in which we store all information, data and all.

Q. → 3.)
Ans. →

Control Unit →

It is the type of memory, in which we control all the system ~~of~~ of the computer.

- ~~It is~~ when we enter extra data, information in the computer, it control of the system.
- Received by control of information data in ALU (Automatic logical unit).

(Q.3.2)

Ans: Basic function of memory :->

1) Storing :->

It is the type of ~~mem~~ computer. In which we store all the information in the system / computer.

2) Controlling :->

It is the type of computer. In which we control of the data, Accounts in the system.

3) Encoding :->

In which we get all information about the memory in the C.P.U.

(Q.3.4)
Ans: :->

Characteristics of Primary memory :->

1) In which, we store all the information, data, Accounts of the system.

2) In, which, ~~we~~ we store files, documents for long time.

3) In which, we get all the information about memory in CPU.
