Q1 Ans → Ram is a form of Computer memory that can be read and changed in any order, typically used to store working data and machine code.

Ram → Ram is type of non-volatile memory used in computers and other electronics devices.

~~SRAM is a type of random access memory that stores data~~

Q3 Ans → Primary memory is the Computer's main memory and stores data temporarily.

1/2

Secondary memory is external memory and saves data permanently. Data stored in primary memory can be directly accessed by the CPU, which cannot be accessed in secondary memory.

Answer needs more clarification
