1) RAM :- Ram It is a Primary storage Device. RAM stands for Random Access Memory. It is find in the Memory Unit of the CPU which is the Central Processing Unit.

Incorrect manner of attempting the question

ROM :- Rom is Read only Memory. It is the Secondary storage device It stores data and information on permanent Basis.

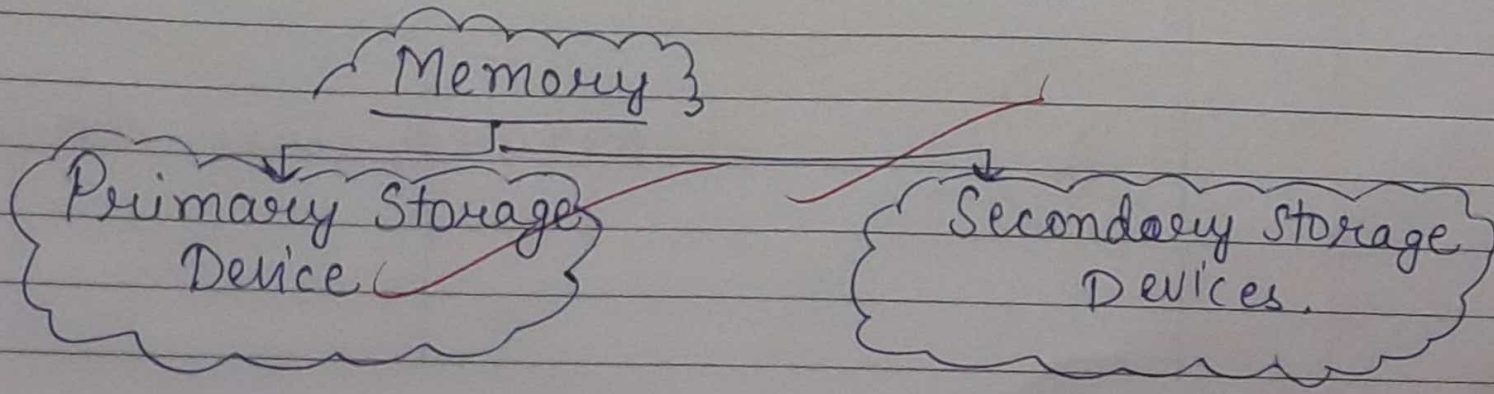

3) Memory :- Memory uses to store data and information in it. Memory is the second part of the Central Processing unit

3

All concepts clear

Memory is Basically of two types :-

* Primary Memory :- It is the main memory places in the Memory Unit of the CPU. It stores the data on Temporary Basis. It means if the memory unit fails then all the Data and information will be removed from CPU.

* Secondary Memory :- It is the external memory of the Central Processing Unit. It stores the data on Permanent Basis. It means the data will be saved after the failure of the Central Processing Unit.

Answer 4)

Basis	Primary Memory	Secondary Memory
Meaning	Memory which finds in the CPU.	Memory which is external from CPU.
Storing	Temporary Basis	Permanent Basis.
Example	RAM, Memory Unit,	chip, Memory card, etc.

2

Answer needs more clarification

corrupt not clear.

Answer: 5) Features of Computer Memory

1/2

Computer memory uses to store the input or saved information after the instruction of the user.
