Q-1) Non volatile memory is used to store data permanently. It is ability to store data after turn off computer.

For example → ROM is non volatile memory. More elaboration of answer is required.

Q-2) Example of volatile memory

1) RAM

2) ✓

Example of non-volatile memory

1) ROM

2) ✓

Answer needs more clarification.

Q-5) ROM is a non-volatile memory. It is ability to store the data after turn off computer. It is a permanent memory.

more elaboration is used in washing machine, phone etc.

ROM is stand Read only memory  
There is one 3 types of ROM

- 3)
- 1) PROM (Programmable Read Only Memory)
  - 2) EPROM (Erasable programmable Read Only Memory)
  - 3) EEPROM (Electronic Erasable programmable Read only memory)

1) PROM: PROM is a non-volatile memory in which only one time <sup>can be</sup> removed and written.

2) EPROM: EPROM is non-volatile memory in which used ultraviolet light is
