Ques → 2 What are the advantage of a hard disk over other storage devices.

Ans → Advantage of a hard disk - :

1. HDD are data storage devices used for storing and retrieving digital information using rapidly rotating disk coated with magnetic material.
2. HDD are fixed i.e cannot be removed the data.
3. HDD have large storage base capacity.
4. HDD have a non volatile memory.

Ques → 3

Ans → A secondary storage device refers to any non-volatile storage device that is internal or external to the computer. It can be any storage device beyond the primary storage that enable permanent data storage. A secondary storage device, backup storage device, tier 2 storage, or external storage. These device store virtually all program and application on a computer, including the operating system, device driver, application and general user data.

Example → Fixed storage (ii) Remove storage

Ques → 4

Ans → A computer hard disk drive is a non-volatile data storage device. Non-volatile

are refer to storage device.

Ques 5
Ans →

These are some characteristics of a secondary memory, which distinguish it from primary memory such as.

(i) It is non-volatile memory which means it retain data ~~ranging from a few~~ ~~megabytes~~ to when power is switched off.

(ii) It allow for the storage of data ranging a few megabytes to petabytes.

(iii) It is cheaper as compared to primary memory.

(iv) Secondary storage device like CD and flash drive can transfer the data from one device to another.
