

Name — Pankaj / Course — OCA / Roll No — 1505
Father's Name — Vijay Kumar

Ans 1 Computer is a electronic Machine that can store, find and arrange information, calculate amounts and control other Machine. Modern Digital electronic computers can perform generic sets to operation known as programs.

Ans 2 speed — A Computer works with higher much speed and accuracy compared to humans while performing mathematical calculation. Computer can process million of instruction per second. The time taken by computers for their operation is microseconds and nanoseconds.

Accuracy — A computer perform calculation with 100% accuracy. Errors may occur due to data inconsistency or inaccuracy.

Diligence — A computer can perform million of tasks calculation with the same consistency and accuracy. it doesn't feel any fatigue or lack of concentration. its memory also makes superior to that human beings.

Versatility — Versatility refers to the capability computer to perform different kinds works with some accuracy and efficiency.

Ans 2 Diligence :- A computer can perform million of the task or calculation with the same consistency and accuracy. it doesn't feel any fatigue or lack of concentration. its memory also makes it superior to that the human beings.

Versatility :- Versatility refers to the capability of a computer perform different kinds of works with same accuracy and efficiency.

Ans 3 The British scientist Charles Babbage - as the father of a computer, thought too Babbage wanted to build a machine that could perform accurate calculation quickly to avoid errors in navigation and engineering. This is when they came up with the design for the first computer called the difference engine in 1822.
