Ques 4 Computer is an electronic machine that can store the data, find and accuracy information, calculate, ~~and~~ amount and control other machine.

Answer 5 1. Speed  $\div$  A computer works with much higher speed and accuracy compared to human while performing mathematical calculation. Computer can process million of instruction per second. The time taken by computer for their is microseconds and more nanoseconds.

2. Accuracy  $\div$  Computer perform calculation with 100% accuracy. Error may occur due to data inconsistency or inaccuracy.

3. Diligence  $\div$  A computer can perform million of task or calculations with the same consistency and accuracy. The memory

4. Versatility  $\frac{2}{3}$  Versatility refers to the capability of a computer to perform different kinds of work with same accuracy and efficiency.

Answer 2

1. Versatility  $\frac{2}{3}$  Versatility refers to the capability of a computer to perform different kinds of work with same accuracy.

2. Diligence  $\frac{2}{3}$  A computer can perform millions of tasks or calculations with the same consistency and accuracy. Its memory also makes it superior to that of human being.

Answer 3

The British scientist Charles Babbage, the father of computer, thought that Babbage wanted to build a machine that could perform accurate calculation quickly to avoid errors in navigation and engineering. This is when he came up with the design for the first computer called the Difference engine in 1822.
