Ms. Monika

Ans 1 > Artificial Intelligence is a new technology which is more advanced than others. In this work is automatically done by giving only one or two instructions.

- ① It is basically used in Robotics
- ② In digital computers as well

Ans 2 > ① Palmtop computer is made up of two words i.e. palm and top which means these computers are very portable and you can put it on palm top and do work it is also called Gaptop.

- ② Tablets are very portable, easily manageable type of computers you can carry it on your bag very easily.

Qm 3 Digital computers are these digital computer which we recently using in this computer we can perform any task such as calculations, data making or storing, photography etc.

Analog computer → These computers are basically used for only one purpose or special purpose such in hospitals for heartbeat of patients, schools, offices etc.

Ans 4 → First generation of computer are those computer which are not portable and not able to do all task as compared to digital computers

First computer named 'abacus' in this only calculation is performed.

Ans 5 (i) Super computer → As understood by name it is super computer. It can perform various task as compared to other computer. Its efficiency, accuracy is more than digital

(ii) Main frame computer → Main frame computer are those which are made for special purpose such as in hospital, companies, factories etc.

(iii) Client Server Network - It means there is only one server and through that all client user are using it. Through main server installation is also given.
