(Q/Ans)

Q5) Explain the basic functions of Computer? - (4)

Ans The basic functions of Computer is:-

- 1) Storage :- Computer is very fast machine. The computer is can store data for a long time.
- 2) Input :- Computer is can gave (computer device) gave input to the Central processing Unit (C.P.U)
- 3) Output :- Computer device is can gave output to do any work. to the Central processing unit.

Q4) Give any three reason why Computer are becoming important in today's life?

Ans Computer is can used many places. ~~and~~ like:-

- 1) hospitals :- Computer is can used in hospitals to making a patient report and details.
- 2) Airports :- Computer is can used in airports to booked a tickets for flites.
- 3) Bank :- Computer is can used in Bank for doing Banking works. And do so many million billion calculation.

Q3) Give any difference between speed & accuracy in term of Computer - 3

Ans speed:- Computer is very fast machine. It do so many work in very speed. Computer do all work in a few seconds. The human takes large time to do any work. Computer do million, billions calculations in few seconds.

accuracy:- Computer do work in accuracy. And computer do any work and any calculation in a accuracy.
