

2. Quick desion :- Computer is a machine, he cannot do work without user. But As a human he cannot take more time to desion.

3. Multitasking :- Computer can different type of work at a same time. You may use your computer for MS word to creating a file and do listening music and take print outs at a same time.

4. storage :- Computer can store large amount of data. It can store data or information in memory like primary memory and secondary memory.

2. processing :- The sequence of actions taken on data is called processing. Input data send to CPU for processing. After processing these data may be very useful information for user.

3. Output :- After processing Computer give result is called output. We can called output as a result.

4. storage :- Computer can store large amount of data. storage capacity of Computer is based on Computer design. We can store data or information for future use.

Speed :-

4 Ans 1. Computer is electronic device which design to work multiple task. Computer can work very fast and the level of accuracy of Computer is very high. In Computer we can store large amount of data. Computer has no feeling and emotion. There are many characteristics of Computer.

feeling and emotions. Like human  
Computer is no tiredness  
and no softness.

### 3. Storage:-

Storage is the most important characteristics of Computer. Computer can store large amount of data. It use memory to store data like floppy disk.

### 3] Speed

1. Computer works very fast. He work in a second which we take hours to complete.

### Accuracy

Computer can performed millions of calculation with the same accuracy.

### 5] Functions of Computer

#### 1. Input:-

Input is a raw information of data enter into Computer from Input device. Input device like keyboard, mouse.

Name - Saffali  
Class Course - DCA  
Roll No - 1527

1 Ans i) Diligence :-

A Computer can work hours without creating any error. If millions of calculation to be performed, it will be performed with the same accuracy.

ii) Versatility :- The computer can work different at the same time. Computer are complete different time of work with the same accuracy. You may use your computer to prepare pay roll slip. Next moment you create any file in MS word, excel etc.

2 Ans i) No I.O :-

Computer is a electronic machine without any user, computer is a dumb machine and useless. Without any user computer cannot do any work.

ii) No Feeling :- Like humans Computer have not
