(i) Diligence - Computer can perform very faster and working without any error because it is possible than with diligence. This is not the important part of this.

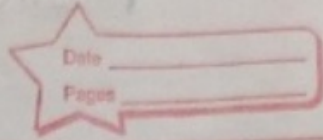

(ii) Versatility - This is the best characteristic of computer. They perform faster and smoothly. This is possible than with versatility.

III) ~~The~~ these reasons computer's becoming important in today's life:

1. The user can work fastly with computer.

2. They stored information permanently.

3. They can do any type of arithmatic calculation like mathematical calculations.

1. Speed
It is very fast and speedy

2. Accuracy
It is very speedy.

2. It determines quickly the (CPU) can substitute

3. Computer compared to human while performing mathematical calculations

3. The computer speed has alternate

3. The accuracy is the ^{speed} ~~design~~ of the

10 These characteristics of computer are:

1. No IQ of computer is a dumb machine. When the user cannot give instructions to computer they cannot work.

2. Security of the computer has also login and password protection.

3. No feeling → Computer has no feeling like human being because computer is a machine.

(1)

Four basic functions of computers

1. Input It is the raw information of computer in processed form (CPU).

2. Processing It is the action of computer on it.

3. Output It is the ~~for~~ processed data

4. Storage It is the stored data or information in computer.
