

4.3 Storage → Storage refers to store data
in storage device like, Harddisk,
SSD, pendrive & memory Card.

(iii) It helps to pay more many types of bill like; electricity, rent, water etc, & also transfer money from one place to other.

computer (iv) It also helps send more documents & PDF file through emails

So> These four basic functions are -> 1) Input 2) output 3) processing 4) Storage.

1) Input -> We can connect more device to get outside data. like -> Printer for scanning, hard copies.

2) Output -> We send can send data outside of the computer through pen drives, hard disk etc.

3) processing -> It refers to the speed of data per fetching in the computer.
