Ans-1

Diligence :- In computer we can record our data in very diligence and accurate way. Diligence of computer refers to the quality of doing work carefully.

Versatility :- Versatility of computer refers to the ability of performing different tasks in computer with very accurate and effective way.

Ans-2

The three main characteristics of computer which are given below -

1) Speed :- A computer works with much higher speed compared to humans while performing mathematical calculations.

2) Accuracy :- Computer perform calculation with very accurate way, and the errors may occurs due to data inconsistency or inaccuracy.

1) Versatility - versatility computer refers to the ability of performing different task in computer in very effective way.

Ans-3

Speed

Accuracy

• Speed is the ability to type the words fast.

Accuracy means typing without errors.

• Speed ensure that maximum word can type in particular time.

Accuracy is nothing but the word spelled correctly.

• Speed increase the typing of the humans.

While, Accuracy increase the ability of typing correctly and effective way.

Ans-4

The three reasons why Computers are becoming important in today's life because it has very effective Accuracy, speed, versatility and Diligency.

1) Diligency :- Diligence of computer refers to the quality of work done in carefully & thoroughly.

2) Speed :- Speed of computer is the ability to type the words fast and accurate in a particular time.

3) versatility :- versatility of computer is the ability of performing different task in computer in very accurate way.

4) Accuracy :- Accuracy of computer means typing without any errors correctly in a particular way.
