

22/8/23

1. Diligence - A Computer can perform millions of tasks or calculations with the same consistency and accuracy. It does not feel any fatigue or lack of concentration. Its memory also that of human being.

Versatility - The ability of Computer to perform a variety of tasks as complex.

2. # Three characteristics of Computer.

1. Speed \rightarrow A Computer work can with much higher speed and accuracy compared to human while mathematical calculation.

2. Memory \rightarrow Memory is the electronic holding place for the introduction and data. A Computer can need to reach quickly. It is where information is stored for immutual purpose.

5. Difference between speed and accuracy in terms of Computers

⇒ [Speed, Accuracy]

A computer works much higher and accuracy compared to humans while performing. Mathematics calculations accuracy refers to the degree of error as speed determines and quick the central processing unit can interpret instruction.

4. Reason why computer is imp. for daily life.

i) Computer becomes very important for our daily life because with the help of computer we can do our work very fast and with we can do any type of work any where.

↳ Advantages of computer.

↳ Speed. A computer works with much higher speed and accuracy.

↳ Memory. Memory is the electronic holding.

place for the instruction and data
for the main use.

5) Computer is a data processing
device that performs four
major functions. input processing
Output Storage. They are basically
the basic functions of Computer
input storage processing and
out.
