

Answers

1st Computer generation: - Computer generation means the computer started to be made. Time to time computer develop their technology. When computer is not made in old time people used Abacus & so many other things.

First computer is develop in china (~~Abacus~~) Chauls Babbage

Answer-2

Digital computer: - It is used in binary digits in computer. People use binary digits which is understandable to computer.

Analog computer: It is used in numericals & calculation. It is mainly used in calculations of numericals.

Answer-3

Based on size

Micro-computer
mini-computer

- Mainframe computer
- Super computer.

explanation- Micro-computer → It is highly used computer. It is also called portable device & handheld device.

- mini computer - These are small in size & fastest computer.
- Mainframe computer - These are specially used computer.
- Super computer - These are the fastest computer.
 - CRAY-1
 - PRATYSH
 - PARAM

Answer-5

Based on work - Analog

- Digital
- Hybrid

Analog computer → These are used for calculations of numerics.

Digital computer - These are used in Binary digit.

Hybrid :- These are the combination of Digital and Analog computer.

Ans-3

5 generation computer.

1:- First generation computer are large in size and these have speed in micro sec & these are used for Vacuum tubes.

2nd generation computer - are smaller than 1st computer & their speed is milli second and have ~~int~~ Transistor.

3rd generation :- These are smaller than 2nd computer & their speed is nano seconds used for Integrated circuit.

4th generation:- These are fastest computer & speed in 300 nano seconds used in large integrated circuit.
