

Laptops are generally better than desktops because Laptops are designed for mass production, low power and speed operation, while CPU is hard for backup implaned document; no technological improvement.

data  
data is material is store in computer like any pdf, file and presentation. text no piece of paper.

~~information~~  
instruction  
~~information~~ It is a comand to the computer to computer language by the user.

information  
It is processed, organised, structured and given to context is useful.

program  
It is a set of instruction given by computer to order the perform task like word

Ans 1 AI, human

Ans 2 i) Banking

ii) Entertainment

iii) offices

Ans 3 Laptops are general-purpose CPU's are not because Laptops are in small size, easy for mass production, low power operation and speed operation while CPU is hard for backup implaned document; no technologic improvement

Ans 4 \* data

data is material is store in computer like any pdf, file and presentation. text no piece of paper.

~~information~~

\* instruction

~~information~~ It is a comand to the computer to computer language by the user.

\* information

It is processed, organised, structured and given to context is useful

\* program

It is a set of instruction given by computer to order the perform task like word processer allow to program what user create the document

Ans 5 ★ Hardware

It is a collection of ~~some~~ physical element that contain a computer system. For example keyboard, mouse, display screen

★ software

It is a set of program. proceduces software and hardware ~~includes~~ ~~with~~ ~~the~~ ~~users~~. what do accomplish task for ~~example~~ example web browsers, games

★ Data

Data is a material which store in computer system like number, text no piece of paper.

★ Program

It is a set of instruction given by computer to order the perform task. like word processer allow to program that user create the document.
